### LINKEDIN

in/yaroslav-stopenchuk

### GITHUB

github.com/humblezxc

### PORTFOLIO

portfolio-yaroslav-stopenchuk

## Skills

### LANGUAGES

TypeScript, JavaScript, HTML5, CSS / SCSS

### FRAMEWORKS

React, Next.js, Node.js

### STATE & DATA

Redux Toolkit, React Query, Zustand

### UI

Tailwind CSS, Radix UI, shadcn/ui

### BACKEND

Supabase, PostgreSQL, REST / OpenAPI

### TESTING

Vitest, Playwright, Testing Library

### DEVOPS

Git, Docker, Kubernetes, CI/CD, Vercel

### AI DEV

Claude Code, agent-first workflow, Cursor

## Languages

Polish (B2)

English (B2)

Ukrainian (Native)

## Strengths

Mentoring & Code Review

Agile / Scrum

Cross-functional Collaboration

## Availability

Available with 2 weeks' notice. Open to Remote, Hybrid, or On-site (Wrocław).

Willing to relocate.

# Yaroslav Stopenchuk

## Frontend / Full-Stack Developer

React · Next.js · TypeScript

Frontend / Full-Stack Developer with 3+ years building React, Next.js, and TypeScript products, from 10+ commercial software-house projects to a self-built multi-tenant SaaS with role-based access control. Comfortable end-to-end, from UI to database, testing, and CI/CD.

## Experience

### Full-Stack Developer

Mar 2026 - Present

#### PLZ Spółdzielnia, Warsaw (Remote)

- Lead an agent-first development workflow: turn requirements into specs, then direct Claude Code to implement, shipping features ~2× faster than hand-coding while owning review and testing.
- Building an AI assistant web client in React 19 + TypeScript with real-time SSE streaming, Zustand state, a type-safe OpenAPI client, and a Radix/shadcn + Tailwind CSS UI.
- Shipped document generation (DOCX/PDF), file uploads, and voice I/O in an accessible, i18n (PL/EN) interface.
- Cover the app with Vitest + Playwright tests (~80% coverage); ship via multi-stage Docker and Kubernetes on GitHub Actions CI/CD.

### Independent Developer

May 2025 - Feb 2026

#### Self-directed

- Built Smart Shift Scheduler, a self-initiated multi-tenant workforce SaaS (Next.js, TypeScript, Supabase/PostgreSQL + RLS) with 4-tier RBAC and complete org-level data isolation.
- Implemented drag-and-drop scheduling (@dnd-kit) and a shift-generation algorithm that cut manual scheduling time ~75%, plus a Recharts analytics dashboard, i18n, dark mode, and PWA (Lighthouse 100 / 100 / 96).
- Engineered token-based team invitations, transactional emails, and a guided onboarding wizard.
- Delivered several smaller freelance web projects for clients alongside the product build.

### Frontend Developer

Oct 2023 - May 2025

#### RED Software House, Wrocław

- Delivered 10+ commercial projects (Next.js, Gatsby) for clients including Opera and the Warsaw Museum, cutting initial load times ~12% via GSAP and asset optimization.
- Built Elektrobohater, a social-platform SPA, with Redux Toolkit & React Query: real-time feeds, filtering, and content management for thousands of users.
- Mentored a junior developer with hands-on code reviews, reducing their ramp-up time ~40%.

## Projects

### Smart Shift Scheduler (Next.js, TypeScript, Supabase)

Production multi-tenant SaaS: scheduling, RBAC, analytics dashboard, i18n, PWA.

[Demo ↗](#)

### Elektrobohater (React, Redux Toolkit, React Query)

Social platform for electricians with real-time feeds, filtering, and user profiles. [Live ↗](#)

### Warsaw Museum Collections (React, Docker)

Refactored a legacy class-component codebase to hooks and built shopping-cart logic.

[Live ↗](#)

### RED Software House Site (Gatsby, GSAP)

Full refactor with multi-language routing and high-performance GSAP animations.

[Live ↗](#)

## Education

### Bachelor of Computer Science

2019 - 2023

Lviv Polytechnic National University
