

Yaroslav Stopenchuk

Frontend Developer / Full-Stack Developer

Wrocław, Poland | +48 575 619 850 | stopenchuk.yaroslav@gmail.com | linkedin.com/in/yaroslav-stopenchuk | github.com/humblezxc | portfolio-yaroslav-stopenchuk.vercel.app

SUMMARY

Frontend / Full-Stack Developer with 3+ years building React, Next.js, and TypeScript applications, from 10+ commercial software-house projects to a self-built, production multi-tenant SaaS with role-based access control. Works end-to-end across UI, REST/OpenAPI APIs, PostgreSQL, automated testing, and CI/CD. Available with 2 weeks' notice; open to remote, hybrid, or on-site roles (Wrocław) and willing to relocate.

SKILLS

Languages: TypeScript, JavaScript, HTML5, CSS, SCSS
Frameworks & Libraries: React, Next.js, Node.js, Redux Toolkit, React Query, Zustand
Styling & UI: Tailwind CSS, Radix UI, shadcn/ui, SCSS
Backend & Data: Supabase, PostgreSQL, REST APIs, OpenAPI
Testing: Vitest, Playwright, Testing Library
DevOps & Tools: Git, Docker, Kubernetes, CI/CD, GitHub Actions, Vercel
Practices: Agile / Scrum, code review, accessibility, internationalization (i18n)
AI Development: Claude Code, agent-first / AI-assisted development, Cursor

EXPERIENCE

Full-Stack Developer, PLZ Spółdzielnia, Warsaw (Remote) Mar 2026 - Present

- Lead an agent-first development workflow: turn requirements into specs, then direct Claude Code (an AI coding agent) to implement, shipping features ~2x faster than hand-coding while owning review and testing.
- Building an AI assistant web client in React 19 and TypeScript with real-time SSE streaming, Zustand state management, a type-safe OpenAPI client, and a Radix/shadcn + Tailwind CSS UI.
- Shipped document generation (DOCX/PDF), file uploads, and voice input/output in an accessible, internationalized (PL/EN) interface.
- Cover the app with Vitest and Playwright tests (~80% coverage); ship via multi-stage Docker and Kubernetes through GitHub Actions CI/CD.

Independent Developer, Self-directed May 2025 - Feb 2026

- Built Smart Shift Scheduler, a self-initiated multi-tenant workforce SaaS (Next.js, TypeScript, Supabase/PostgreSQL with row-level security) with 4-tier role-based access control and complete org-level data isolation.
- Implemented drag-and-drop scheduling and a shift-generation algorithm that cut manual scheduling time ~75%, plus an analytics dashboard, internationalization, dark mode, and PWA support (Lighthouse 100/100/96).
- Engineered token-based team invitations, transactional emails, and a guided onboarding wizard.
- Delivered several smaller freelance web projects for clients alongside the product build.

Frontend Developer, RED Software House, Wrocław Oct 2023 - May 2025

- Delivered 10+ commercial projects (Next.js, Gatsby) for clients including Opera and the Warsaw Museum, reducing initial load times by ~12% via GSAP and asset optimization.
- Built Elektrobohater, a social-platform SPA, using Redux Toolkit and React Query with real-time feeds, filtering, and content management for thousands of users.
- Mentored a junior developer through hands-on code reviews, reducing their ramp-up time by ~40%.

PROJECTS

- Smart Shift Scheduler** (Next.js, TypeScript, Supabase): production multi-tenant SaaS with scheduling, RBAC, analytics, i18n, and PWA. smart-shift-scheduler.vercel.app
- Elektrobohater** (React, Redux Toolkit, React Query): social platform with real-time feeds, filtering, and user profiles. elektrobohater.pl
- Warsaw Museum Collections** (React, Docker): refactored a legacy class-component codebase to hooks and built shopping-cart logic. kolekcje.muzeumwarszawy.pl
- RED Software House Site** (Gatsby, GSAP): full refactor with dynamic multi-language routing and high-performance GSAP animations. redsoftware.io

EDUCATION

Bachelor of Computer Science, Lviv Polytechnic National University 2019 - 2023
